

THE GROVE SPA

& BOUTIQUE

PDO Thread Lift Post-Treatment Continued

When to Call:

- If any of the threads are exposed or start to extrude.
- If you develop a reddened, hard, painful nodule over one of more of the threads.
- If you experience increased redness, swelling, or pain at the insertion site.
- Irregularity or visible ridges (buckling) of threads (2 weeks post-treatment).

Please Note:

- To increase the rate of healing time and decrease swelling or bruising, your provider may encourage you to take oral antihistamines (Zyrtec, Benadryl) and histamine blockers (Zantac, Prilosec, Tagamet).
