

THE GROVE SPA

& BOUTIQUE

Lip Flip Post-Treatment

Please follow this care plan closely in order to see the best results.

On the day of your treatment:

- Immediately after Botox®/Dysport®/Daxxify® treatment, it is essential that you do not lay down or wear any hats or headbands for a minimum of 6 hours to prevent undesired movement of the Botox®/Dysport®/Daxxify®.
- Near the injection sites, there may be redness, swelling, and bruising. Avoid itching, rubbing, or touching the area. This is normal and generally disappears within a few days.
- Avoid strenuous exercise for 12 hours after Botox®/Dysport®/Daxxify® as it can increase the amount of bruising and prevent undesired movement of Botox®/Dysport®/Daxxify®. If bruising does occur, or you bruise easily, Arnica, an over-the-counter natural medication can be used. Tylenol and cold compresses can also be used to minimize discomfort.

2-14 Days After:

- It can take up to 2 weeks for Botox®/Dysport®/Daxxify® full results to be seen.
- Your provider will check in with you at the 2 week mark to make sure you're satisfied with your results. If your desired results are not seen by 2 weeks post treatment, you may need additional units. You are charged for the amount of Botox®/Dysport®/Daxxify® used, and therefore will be charged for any additional units injected during any subsequent appointments.
