## Dermal Filler Dissolving Post-Treatment

### **On the day of your treatment:**

- There may be redness, swelling and bruising near the injection sites. This is normal and generally disappears within a few days.
- If bruising does occur, or you bruise easily, Arnica, an over the counter natural medication can be used. Tylenol and cold compresses can also be used to minimize discomfort.
- Avoid excessive sun exposure, especially if you're prone to cold sores.
